Rejections

Prior pending Claims 1-10 and 14-30 were rejected for various reasons. Without conceding the correctness of the rejections, and without waiving any arguments for patentability they may otherwise have had, Applicants have herein canceled the prior pending claims, and herewith submit new Claims 31-36. Applicants respectfully submit that all prior rejections are now moot.

Remarks Regarding Patentability of New Claims

New Claim 31 recites the steps of, *inter alia*: c) selecting at least one quantitative first parameter related to an individual's asthmatic condition, a failure event and the individual's health, for measurement and analysis; d) selecting at least one qualitative or quantitative second parameter related to the individual's asthmatic condition and the individual's environment, for determination and analysis; f) using a data measurement

mechanism to measure the first parameter at times and at a frequency according to a sampling strategy, to generate first data concerning the first parameter; g) determining the second parameter at times and at a frequency according to the sampling strategy, to generate second data concerning the second parameter; h) using a data acquisition mechanism to store the first data and the second data on a storage medium; i) using an electronic data analysis mechanism to analyze the first data and the second data, whereby the data analysis mechanism comprises software employing reliability engineering techniques; and j) using the data analysis mechanism to identify an environmental cause of the failure event. By dependency, each of new Claims 32-36 includes all of these step elements.

Without conceding the presence of any other elements or waiving any other arguments they may have, Applicants believe, and submit, that the combinations of references applied by the Office in the Office Action dated 11/17/2009 do not teach or suggest each of step elements c), d), f), g), h), i) and j) in combination as recited by the new claims. Further, it is believed that the combinations of prior art references previously applied lacks any teaching or suggestion of individual step elements d) and j).

Conclusion

This response represents an earnest effort to place the present application in proper form for allowance. In view of the foregoing, entry of the amendments presented herein, reconsideration of this application, and allowance of the pending claims are respectfully requested.

Respectfully submitted,
